World Geography
Amazon Uncontacted Tribes

Directions: Read the article below on an uncontacted tribe in the Amazon rain forest and then answer the thought questions at the end of the article. Once finished you will be placed in teams to debate whether or not the tribes should be contacted.

Debate Format:
- You will be working with others to design an argument either in favor or against attempting to contact the uncontracted tribes of the Amazon.
- Read the article below and come up with your own personal ideas, then you will be placed in teams and start organizing arguments for a class debate.

Aerial images prove existence of remote Amazon tribe

Deep in the Amazon jungle, one of the Brazil’s last uncontacted indigenous tribes has been photographed from the air, to prove its existence.

The pictures show tribesmen, painted red from head to toe, preparing to defend themselves with longbows against the aircraft carrying out the photography.

The images, taken by the Brazil’s department for Indian affairs (Funai), reveal a number of thatched roof huts in a small clearing in the forest, in the western Amazon, close to Envira, which is not far from the border with Peru.

Funai warned that logging in the region threatened the existence of the few remaining uncontacted indigenous communities.

"We did the overflight to show their houses, to show they are there, to show they exist," said Jose Carlos dos Reis Meirelles, an expert on uncontacted tribes at Funai. "This is very important because there are some who doubt their existence."

Meirelles said the tribe lived in six small communities, each with about six communal houses, in an area known as the Terra Indigena Kampa e Isolados do Envira.

He added that other uncontacted groups on the Peruvian side of the border, who have also been photographed by experts, were being pushed from their homes by illegal logging.
"What is happening in this region [of Peru] is a monumental crime against the natural world, the tribes, the fauna, and is further testimony to the complete irrationality with which we, the civilised ones, treat the world," Meirelles said.

Loggers, often prepared to kill as they move into new areas, have forced uncontacted tribes from Peru into Brazil. The area is regularly full of smoke from the burning of recently-logged areas.

The Brazilian government has a policy of not contacting the few tribes which are untouched by the outside world and whose way of life has apparently changed little in thousands of years. It is not known to which tribe they belonged, Funai said.

It is understood that when the plane first overflew the village, the people scattered into the forest. When it returned a few hours later they had painted themselves red and fired arrows into the sky.

"They must have suffered some sort of trauma in the past and must know that contact is not a good thing," Fiona Watson, of Survival International, said.

Her organisation estimates that there are around 100 similar groups around the world in places like Brazil, the Andaman Islands and New Guinea.

"All of them face a common threat. Their lands are increasingly being encroached upon by loggers, oil companies and so on. They are under threat of violence. We know of past cases where 50% of the community has been lost within 12 months of initial contact [with the outside world]," she told the BBC's Today programme. She welcomed the Brazilian policy of not contacting groups and attempting to demarcate lands to prevent unrestrained land-grabbing.

**Thought Questions:**

1. Do you think the government should try to contact these people? Why or Why Not?

2. What might happen if the government does? What might happen if the government does not?

3. What steps do you think the government should take to ensure their policy of non-contact succeeds?
