

Surviving in a Dry Land

Name:

Directions: Head to the desert dome with a partner and find two plants or animals to use as a case study. Make sure you read any of the signage about the particular species and specifically focus on their adaptations. You will be putting together a short presentation of the adaptations desert species make to live in a particular environment on some sort of presentation software (you will need to download your poster/powerpoint/canva as a pdf or post it to your portfolio in some other manner) and present about your two species in class. You need to diversify the type of species you look at (if your first species is a bird, then your next species needs to be a plant, insect, reptile, fish, mammal, etc..).

For each species include:

- Common Name
- Scientific Name
- Range Map - Overlaid with Biome Map
- Picture
- Species Specific Adaptations
